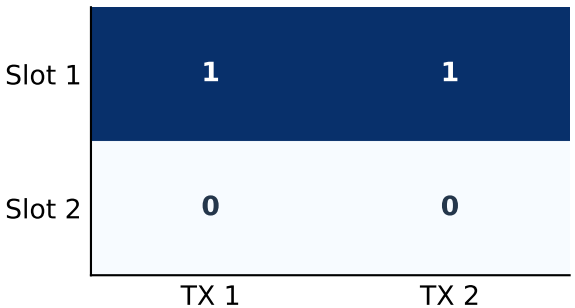
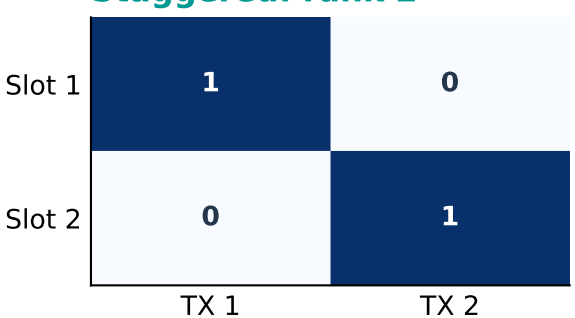
Independent measurements reveal action effects

77.1% lower Bayesian response error at equal transmitter-on airtime

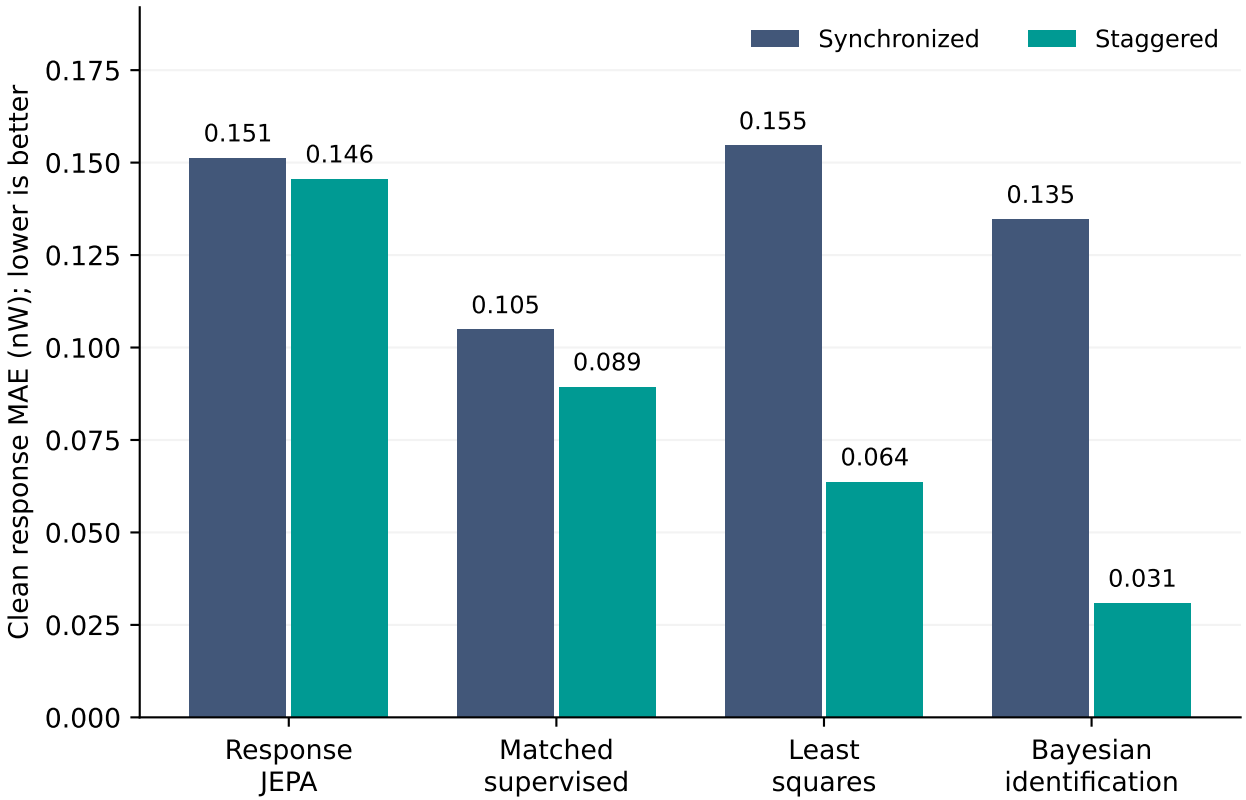
Synchronized: rank 1



Staggered: rank 2



Recorded errors at K = 2 feedback observations



Left: registered nominal activity patterns, before missing reports. Both K2 designs use 2 transmitter-airtime units.
Right: recorded means; three training seeds per learned family. Numerical controls use the same measurement episodes.
Actual Sionna RT kernels; constructed probe/device/noise episodes. One warehouse, five held-out blocker poses.
Response JEPA fails its advantage gate. No packet-delivery, hardware or cross-warehouse claim.
