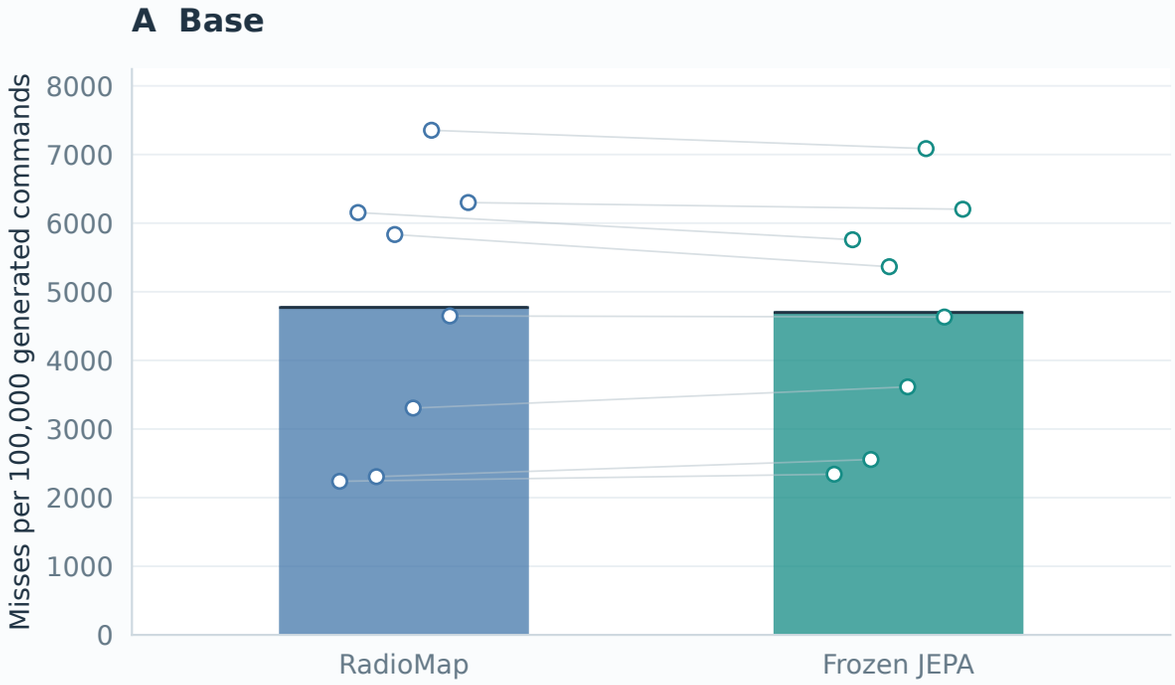
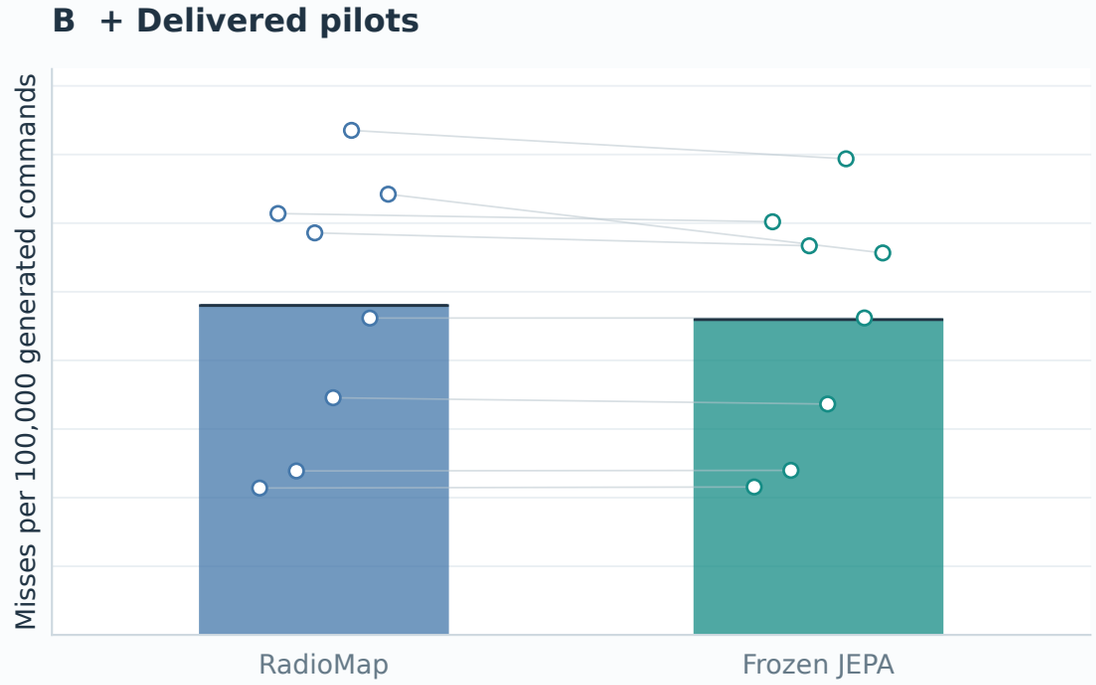
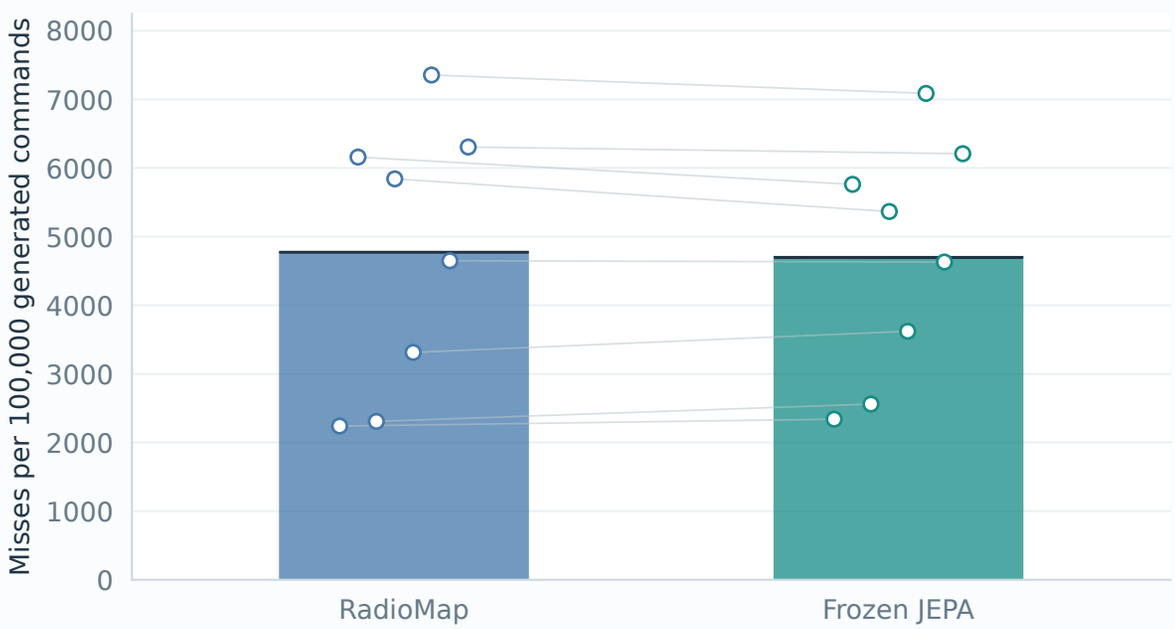
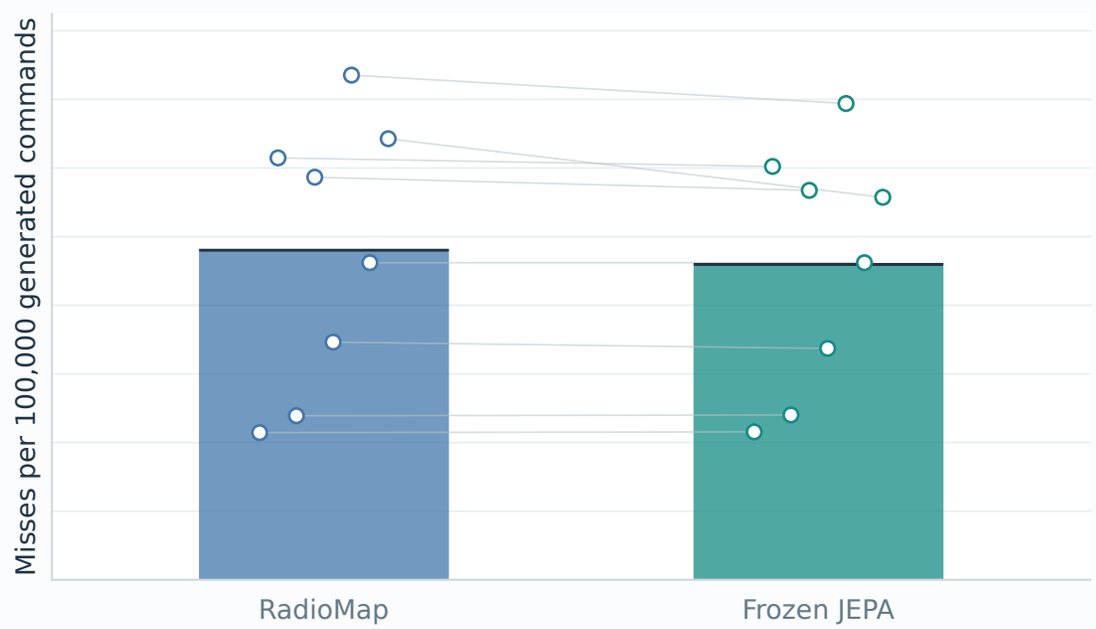
Do delivered pilots and cached forecasts improve packet delivery?

Fixed 2 × 2 experiment · original forecast packages · 8 paired whole-site observations









Observed loss · mean over sites Pending commands counted as misses Whole site; gray lines pair models

All arms retain latest request admission, STR off, full 4 s AP handovers, the same due-scan rule and sustained-recovery watchdog.
Fixed arms are shown without selecting an intermediate controller. Dots represent whole sites, not robots or independently trained models.
Source / causal / paid / exact replay integrity: True. Simulation evidence; fixed neural weights, no hardware or production qualification.
